E2Gather

Eat + Gather > Together

Le Chang (lc2879) Wei Duan (wd2214) Lindsay Neubauer (lan2135) Fang-Hsiang Su (fs2455)

1 Project Desription

E2Gather is a social application that interacts with Facebook to help users find one or more friends to cook and share a meal. This is done by exploring and analyzing the food each user has in his or her refrigerator. Within the system there are two roles: Host and Guest. All users input and update the food contained in their refrigerators. When a user (role: host) wants to host an event, the user inputs the ingredients and quantities for the dish that he or she wants to make and eat and then asks E2Gather which of the user's Facebook friends are the best dinner mates to invite based on the food they have in their refrigerators. A list of potential guests is returned by E2Gather and then the host chooses one or more users (role: guest) to invite to the meal. The host also inputs additional information about the meal such as the time and location. Guests can either accept or decline the invitation. The host is the only user that has privileges to change event information or the event's ingredient list. E2Gather aims to help people use the food they have already bought by bringing people together to share the cooking and eating of a meal.

1.1 System Implementation

The system implementation for E2Gather is shown in Figure 1 and the expected technological details are as follows:

• Programming Language: Ruby

• Web Framework: Rails (Ruby on Rails) [1]

• Web Server: WEBrick [2]

• Data API: Facebook Graph API [3]

• Database: MySQL [4]

• Version Control: Stash [5]

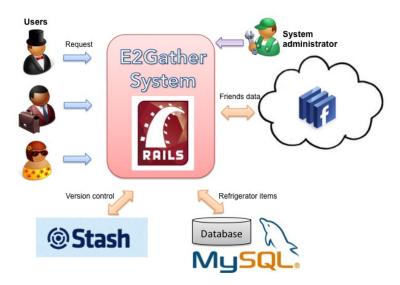

Figure 1: System Implementation

2 CRC Cards

The CRC cards for E2Gather are shown in Figures 2 - 6.

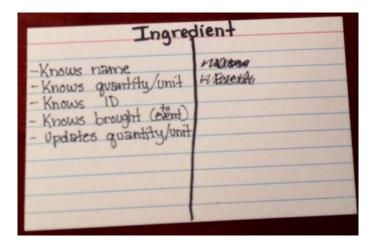

Figure 2: Ingredient CRC Card

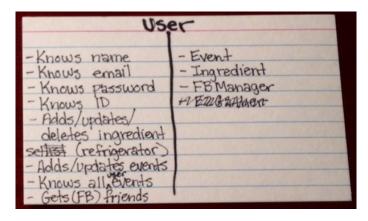

Figure 3: User CRC Card

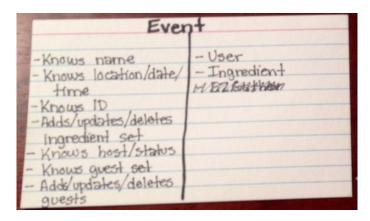

Figure 4: Event CRC Card

EZGather			
- Logs in User - Retrieves information from database - Finds FB friends who use E2Gather - Search E2Gather friends' refrigerator to list - Sends event invitations to users' emails	-User -FBManager -Event -Ingredient		

Figure 5: E2Gather CRC Card

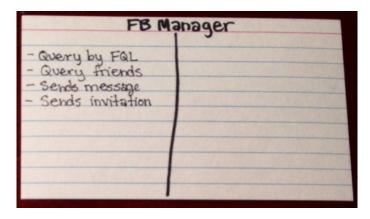

Figure 6: Facebook Manager CRC Card

3 Class Diagram

The Class Diagrams for E2Gather are shown in Figures 7 - 12.

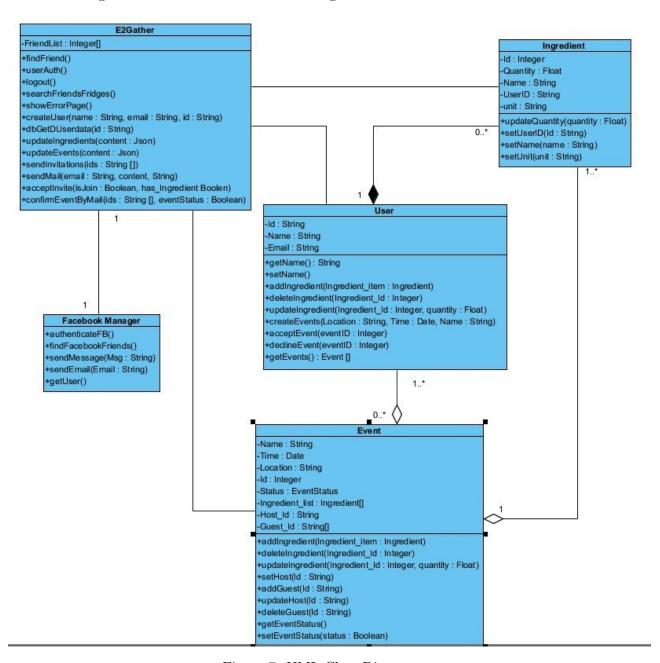

Figure 7: UML Class Diagram

```
FriendList: Integer[]

+findFriend()
+userAuth()
+logout()
+searchFriendsFridges()
+showErrorPage()
+createUser(name: String, email: String, id: String)
+dbGetDUserdata(id: String)
+updateIngredients(content: Json)
+updateEvents(content: Json)
+sendInvitations(ids: String [])
+sendMail(email: String, content, String)
+acceptInvite(isJoin: Boolean, has_Ingredient Boolen)
+confirmEventByMail(ids: String [], eventStatus: Boolean)
```

Figure 8: E2Gather Class Diagram

```
Facebook Manager

+authenticateFB()

+findFacebookFriends()

+sendMessage(Msg : String)

+sendEmail(Email : String)

+getUser()
```

Figure 9: FBManager Class Diagram

```
Ingredient
-Id: Integer
-Quantity: Float
-Name: String
-UserID: String
-unit: String
+updateQuantity(quantity: Float)
+setUserID(Id: String)
+setName(name: String)
+setUnit(unit: String)
```

Figure 10: Ingredient Class Diagram

```
-Id: String
-Name: String
-Email: String
+getName(): String
+setName()
+addIngredient(Ingredient_item: Ingredient)
+deleteIngredient(Ingredient_Id: Integer)
+updateIngredient(Ingredient_Id: Integer, quantity: Float)
+createEvents(Location: String, Time: Date, Name: String)
+acceptEvent(eventID: Integer)
+declineEvent(eventID: Integer)
+getEvents(): Event []
```

Figure 11: User Class Diagram

```
Event
-Name : String
-Time : Date
-Location : String
-ld: Integer
-Status : EventStatus
-Ingredient_list : Ingredient[]
-Host Id : String
-Guest_ld : String[]
+addIngredient(Ingredient item: Ingredient)
+deleteIngredient(Ingredient_Id : Integer)
+updateIngredient(Ingredient_ld: Integer, quantity: Float)
+setHost(Id : String)
+addGuest(Id : String)
+updateHost(ld : String)
+deleteGuest(Id : String)
+getEventStatus()
+setEventStatus(status : Boolean)
```

6 Technical Tasks and Schedule

The following is our outline of technical tasks and schedule. Gray area indicates completed tasks.

Task	Due Date	Time Estimate	Assigned
Requirements/Planning Doc	03 October	$4 \times 02 \text{ hrs} = 08 \text{ hrs}$	All
Background pickup	06 October	$4 \times 03 \text{ hrs} = 12 \text{ hrs}$	All
Environment setup:			
Setup Ruby on Rails		$2 \times 04 \text{ hrs} = 08 \text{ hrs}$	Lindsay, Wei
Setup MySQL database		$2 \times 03 \text{ hrs} = 06 \text{ hrs}$	Fang-hsiang, Le
Create database Schema		$2 \times 01 \text{ hrs} = 02 \text{ hrs}$	Lindsay, Wei
Group Meeting	07 October	$4 \times 01 \text{ hrs} = 04 \text{ hrs}$	All
Design and Requirements Documents	13 October	$4 \times 05 \text{ hrs} = 20 \text{ hrs}$	All
Facebook authentication in Ruby		$2 \times 02 \text{ hrs} = 04 \text{ hrs}$	Fang-hsiang, Le
Basic authentication testing		$2 \times 01 \text{ hrs} = 02 \text{ hrs}$	Le, Fang-hsiang
Group Meeting	14 October	$4 \times 01 \text{ hrs} = 04 \text{ hrs}$	All
Event participant search	20 October	$2 \times 03 \text{ hrs} = 06 \text{ hrs}$	Lindsay, Wei
Event creation and invitation		$2 \times 03 \text{ hrs} = 06 \text{ hrs}$	Lindsay, Wei
Event invitation/response		$2 \times 01 \text{ hrs} = 02 \text{ hrs}$	Lindsay, Wei
Refrigerator contents creation		$2 \times 04 \text{ hrs} = 08 \text{ hrs}$	Fang-hsiang, Le
Refrigerator contents update		$2 \times 01 \text{ hrs} = 02 \text{ hrs}$	Fang-hsiang, Le
Basic testing of refrigerator/search		$4 \times 01 \text{ hrs} = 04 \text{ hrs}$	All
Group Meeting	21 October	$4 \times 01 \text{ hrs} = 04 \text{ hrs}$	All
Event messaging	27 October	$2 \times 10 \text{ hrs} = 20 \text{ hrs}$	Pair 1 (TBD)
Event confirmation		$2 \times 03 \text{ hrs} = 06 \text{ hrs}$	Pair 2 (TBD)
Basic testing of events		$2 \times 02 \text{ hrs} = 04 \text{ hrs}$	Pair 2 (TBD)
Group Meeting	28 October	$4 \times 01 \text{ hrs} = 04 \text{ hrs}$	All
Basic testing of messaging	31 October	$4 \times 02 \text{ hrs} = 08 \text{ hrs}$	All
